* (L) Internal volume: is the total box volume, including the volume occupied by the duct and speaker.

* Any changes in the box dimensions suggested in this manual, without a correct design review, may cause speaker over displacement and poor bass response.

RECOMMENDATIONS

1. Use amplifiers with high-pass filter (HPF) to protect your speaker from over-displacement.
2. The boxes dimensions indicated in this manual can be changed according to the need of your project, as long as the box volume, as well the duct volume and area recommended are maintained.
3. If the box volume is changed, a simulation software is recommended to obtain the tuning frequency (Fb) informed in this manual. Change the box volume may result in changes in the duct volume.
